

Bracha Hasid

Software Engineering

0527134021 | B34021@gmail.com | BrachaGitHub

Professional Profile

Software developer with strong analytical thinking, hands-on experience integrating **AI** technologies, and fast self-learning ability. Experienced in solving complex problems and building efficient solutions using modern **AI** tools. Selected as a programming mentor, teaching programming fundamentals and simplifying complex concepts. Ambitious and goal-oriented, with strong teamwork, time management, and execution skills.

Professional Experience

AI Image Filtering System -PicUp

Python, React, MongoDB, REST API, Computer Vision, Machine Learning, Deep Learning | [Source Code](#)

Developed an end-to-end **AI** system for automated image processing, classification, and filtering of event images:

- Achieved 97% accuracy in duplicate image detection using Image Hashing.
- Processed 10,000+ images using ML and Deep Learning models for image quality grading.
- Built a scalable REST API for image processing workflows.
- Developed a React UI for smart image selection.
- Optimized system performance for large-scale workloads.

Task Management Web Application | Angular 19, Node.js, SQL, RxJS, NGRX, Angular Material | [Source Code](#)

- Developed a web-based task management system with modern interface and scalable client-server architecture.
- Implemented a reactive system using RxJS, NGRX and Angular Material with reusable components.
- Designed an internal user chat system and applied Design Patterns for maintainable development.

Library Management System | React, Java, Spring Boot | [Source Code](#)

Developed a full stack library management system that includes book lending, advanced search and smart filtering. Implemented a responsive UI and optimized performance and scalability.

Algorithm Projects | Java, C#, C++, C, Python

Development and implementation of complex runtime logic using advanced data structures with high efficiency. Very high achievements in tests and in the Advanced programming program (UltraCode).

Professional Knowledge

- **Programming Languages:** Python, Java, C#, C++, C.
- **Web Development:** React, Angular, Node.js, .NET Core, JavaScript, TypeScript, REST APIs.
- **Databases:** SQL Server, MongoDB.
- **AI:** Copilot, GPT, Claude, PyTorch.
- **Cloud & DevOps:** Git, AWS, Docker.
- **Business Automation:** n8n
- **CS Fundamentals:** Algorithms, Data Structures, Computer Networks, Math, Software Engineering Methodologies.

Education

2024 – 2026 | Software Engineering Studies - Very High GPA.

- Professional studies to obtain a Software Engineering degree from the Ministry of Education.
- Enrichment studies Kamatech – UltraCode.
- Teaching Certificate - Ministry of Education.

Languages

Hebrew: Mother tongue | **English:** High proficiency.
